# Sergio Sediq
## Software Engineer

(+44) 7453323805 | sediqsergio@gmail.com | LinkedIn | GitHub | Portfolio

## Education

**Manchester Metropolitan University** — **Sep 2024 – Sep 2025**
*Master of Science in Computer Science* | ***Classification: Merit*** — *Manchester, UK*

**The University of Law** — **Sep 2019 – Jun 2022**
*Bachelor of Laws (Honours)* | ***Classification: 2:1*** — *Manchester, UK*

## Work Experience

**The Co-operative Bank** — **Sep 2022 – Present**
*Application Support Analyst* — *Manchester, UK (Hybrid)*

- Delivered second-line application support for production and test banking systems, handling **500+** contacts a month in **ServiceNow** and **Jira** under **ITIL** incident, problem, and change management, and resolving them within agreed **SLAs** or escalating them to development with reproduction steps
- Investigated application, data, configuration, and **API** faults using **SQL Server**, application logs, and **Splunk**, completed **root cause analysis** so repeat incidents were raised to development as permanent fixes, and closed or handed over **35** security incidents a month
- Monitored live applications in **Grafana**, supported releases and production changes on **AWS** and **Azure**, and used **Python** and **Java** to script checks, trace defects, and apply data corrections
- Kept incident records, support guides, and a known-issues log current, and worked with business users, infrastructure, and engineering on production issues, access changes, and **Active Directory** reviews in a regulated bank

**Peltarion** — **Jan 2021 – Apr 2021**
*Software Engineer Intern* — *London, UK (Remote)*

- Owned end-to-end development of a production-grade service using **AWS CDK (TypeScript)** and **Java**-based **AWS Lambda** functions, automating manual campaign management and scaling to **6M+** emails/day
- Launched with **AWS CloudWatch** dashboards used daily by enterprise clients, cutting costs by £**8K+**/month and saving **80+** hours of manual work each week
- Integrated with live systems processing **40M+** events/day by connecting **AWS SNS** and **SQS** to internal services and persisting artifacts in **AWS S3**, reducing campaign processing time by **23%**

**KPMG** — **Feb 2020 – May 2020**
*Software Engineer Intern* — *Madrid, Spain (Remote)*

- Owned development of a **Cloud Security Posture Management** tool using **Python Flask REST APIs**, **PowerShell** scripting, **multi-cloud SDKs**, **JSON** metadata, and **MySQL**, deployed for **10+** Fortune 500 clients, saving **200+** hours/month in manual cloud audit effort
- Developed **13 Python Azure** cloud audit bots for KPMG's **Intelligent Automation Platform** to automate control validation and compliance checks for admin access, password policies, **CIS**, **NIST**, and **CSA CCM** baselines, used globally by **8** KPMG member firms
- Orchestrated cloud pipeline automation for **Active Directory** group creation using **Terraform**, **Bash**, **Docker** on **Kubernetes**, with **GitLab** + **Jenkins** CI/CD for automated deployment, reducing cloud operation costs by **15%**
- Resolved **120+** IAM, IaC, and microservice issues on **ServiceNow** by automating **Splunk**-triggered tickets, cutting turnaround time by **70%**

## Projects

**On-Orbit Collision Predictor** | *Source Code* — **Django | MATLAB | Next.js**

- Built a collision-risk platform using **Django**, **MATLAB**, **scikit-learn**, and **Next.js**, resulting in ingestion of **58 CDM attributes** into **PostgreSQL** prediction reports with role-based access and admin usage monitoring

**MyHealthPal** | *Source Code* — **TensorFlow | Spring Boot | Next.js**

- Built a virtual care platform using **Next.js**, **Spring Boot**, **Flask**, **TensorFlow**, and **OpenAI**, resulting in a sentiment model trained on **1.6M tweets** at ∼**94%** accuracy for therapist chat

**AI Studio 2.0** | *Source Code* — **FastAPI | Next.js | Docker**

- Built a streaming chat app using **FastAPI**, **Next.js**, and **Docker**, resulting in live **SSE** responses with **Prism** highlighting and a **Korean/English** UI on OpenAI-compatible backends

**Chatify** | *Source Code* — **React | TypeScript | Firebase**

- Built a realtime chat app using **React**, **TypeScript**, and **Firebase**, resulting in **Google** sign-in with one-to-one and group conversations, replies, and Storage uploads

**CatchUp** | *Source Code* — **Swift | SwiftUI | SwiftData**

- Built an iOS relationship assistant using **SwiftUI** and **SwiftData**, resulting in offline reminders and one-tap message suggestions synced from the **iOS Contacts** app

## Technical Skills

**Languages:** JavaScript, TypeScript, Python, Java, SQL, HTML5, CSS

**Developer Tools:** AWS, Azure, Google Cloud Platform, Git, Docker, Kubernetes, CI/CD, Jenkins, Jira, Postman, Firebase, Power BI

**Libraries/Frameworks:** Spring Boot, Flask, Node.js, React, Next.js, Vue.js, PostgreSQL, NumPy, Pandas, Scikit-learn, TensorFlow
