Education

Manchester Metropolitan University — **Sep 2024 – Sep 2025**
Master of Science in Computer Science | ***Classification: Merit*** — *Manchester, UK*

The University of Law — **Sep 2019 – Jun 2022**
Bachelor of Laws (Honours) | ***Classification: 2:1*** — *Manchester, UK*

Work Experience

The Co-operative Bank — **Sep 2022 – Present**
Application Support Analyst — *Manchester, UK (Hybrid)*

- Delivered second-line application support for production and test banking systems, handling **500+** contacts a month in **ServiceNow** and **Jira** under **ITIL** incident, problem, and change management, and resolving them within agreed **SLAs** or escalating them to development with reproduction steps
- Investigated application, data, configuration, and **API** faults using **SQL Server**, application logs, and **Splunk**, completed **root cause analysis** so repeat incidents were raised to development as permanent fixes, and closed or handed over **35** security incidents a month
- Monitored live applications in **Grafana**, supported releases and production changes on **AWS** and **Azure**, and used **Python** and **Java** to script checks, trace defects, and apply data corrections
- Kept incident records, support guides, and a known-issues log current, and worked with business users, infrastructure, and engineering on production issues, access changes, and **Active Directory** reviews in a regulated bank

Peltarion — **Jan 2021 – Apr 2021**
Software Engineer Intern — *London, UK (Remote)*

- Owned end-to-end development of a production-grade service using **AWS CDK (TypeScript)** and **Java**-based **AWS Lambda** functions, automating manual campaign management and scaling to **6M+** emails/day
- Launched with **AWS CloudWatch** dashboards used daily by enterprise clients, cutting costs by £**8K+**/month and saving **80+** hours of manual work each week
- Integrated with live systems processing **40M+** events/day by connecting **AWS SNS** and **SQS** to internal services and persisting artifacts in **AWS S3**, reducing campaign processing time by **23%**

KPMG — **Feb 2020 – May 2020**
Software Engineer Intern — *Madrid, Spain (Remote)*

- Owned development of a **Cloud Security Posture Management** tool using **Python Flask REST APIs**, **PowerShell** scripting, **multi-cloud SDKs**, **JSON** metadata, and **MySQL**, deployed for **10+** Fortune 500 clients, saving **200+** hours/month in manual cloud audit effort
- Developed **13 Python Azure** cloud audit bots for KPMG's **Intelligent Automation Platform** to automate control validation and compliance checks for admin access, password policies, **CIS**, **NIST**, and **CSA CCM** baselines, used globally by **8** KPMG member firms
- Orchestrated cloud pipeline automation for **Active Directory** group creation using **Terraform**, **Bash**, **Docker** on **Kubernetes**, with **GitLab** + **Jenkins** CI/CD for automated deployment, reducing cloud operation costs by **15%**
- Resolved **120+** IAM, IaC, and microservice issues on **ServiceNow** by automating **Splunk**-triggered tickets, cutting turnaround time by **70%**

Projects

EKS Microservices | *Source Code* — **AWS EKS | Helm | CI/CD**

- Deployed a microservices platform using **AWS EKS**, **Helm**, and **GitHub Actions**, resulting in **4** services autoscaling from **3** to **15** pods across **3** availability zones with rolling updates and centralized logging

Multi-Tier AWS App | *Source Code* — **Terraform | AWS | CI/CD**

- Provisioned a 3-tier web application using **Terraform**, **Docker**, and **GitHub Actions**, resulting in a load-balanced application tier of **3–10** instances and Multi-AZ **PostgreSQL** across **2** availability zones

AI DevOps IDP | *Source Code* — **Terraform | EKS | Argo CD**

- Developed an internal developer platform using **FastAPI**, **Backstage**, **Terraform**, **AWS EKS**, and **Argo CD**, resulting in diagnosis of failing pods, out-of-memory crashes, and image-pull errors, with runbook search in a developer portal

On-Orbit Collision Predictor | *Source Code* — **Django | MATLAB | Next.js**

- Built a collision-risk platform using **Django**, **MATLAB**, **scikit-learn**, and **Next.js**, resulting in ingestion of **58** close-approach warning fields into **PostgreSQL** prediction reports with role-based access and admin usage monitoring

MyHealthPal | *Source Code* — **TensorFlow | Spring Boot | Next.js**

- Built a virtual care platform using **Next.js**, **Spring Boot**, **Flask**, **TensorFlow**, and **OpenAI**, resulting in a sentiment model trained on **1.6M tweets** at ∼**94%** accuracy for therapist chat

Technical Skills

Languages: Python, TypeScript, Java, SQL, PowerShell, Bash, HTML, CSS

Developer Tools: AWS (CDK, Lambda, S3, SNS, SQS, CloudWatch), Azure, Google Cloud Platform, IAM, Terraform, Docker, Kubernetes, Helm, Ansible, Linux, Git, GitHub Actions, GitLab, Jenkins, CI/CD, Grafana, Prometheus, Splunk, ServiceNow, Jira

Libraries/Frameworks: Spring Boot, Flask
